HIGH QUALITY HANDCRAFTED ALUMINIUM BOATS

AF 900

The AluForce 900 has even more space than the 870. Approved for **up to 10 persons**, this model is very well **suitied for the commercial sector**. Maximum safety is ensured by the extra high walls in the cockpit of 73 cm and an additional 15 cm railing height. The AF 900 also has an **offshore bracket** and therefore an extended hull. Engines are installed behind the stern, creating more space in the cockpit. With the bracket the boat lies about 80 cm longer in the water and thus supports the already very stable and fast running in heavy, rough water. The traditionally built hull with its deep V-shape is designed for outboards with up to 500 hp (also double engines). The cabin, in which up to **4 adults can sleep** in the bow, can be equipped with a powerful independent heater. Together with a standard **seperate toilet room** and a galley option, the equipment also allows longer day trips. With the appropriate towing vehicle and trailer size, the AF 900 can also be trailered.

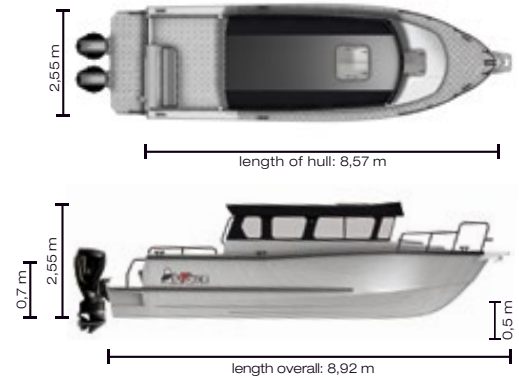

well suited for commercial sector
offshore bracket, double engines

10 persons, up to 4 beds
seperate toilet room
